

CampusRide

It's an app that helps college students going the same way safely share a ride so they can split the cost of getting home.

#AssetLight

The Opportunity Formula

Discovery Phase: Unfiltered Proof of Market Demand

The Unfiltered Demand

The behavior natively exists. Students are actively trying to share rides, proving the market need.

The Critical Flaw

Current hacks are fragmented, slow, manual, unverified, and lack fundamental safety protocols.

Demand is proven. Execution is flawed. CampusRide provides the infrastructure.

Defining the Innovation: A Product Improvement Model

	Traditional Ride-Hailing (Uber/Bolt)	Current Hacks (WhatsApp)	CampusRide
Infrastructure Mode	Fleet-heavy, driver payroll	No infrastructure	100% Peer-to-Peer, Asset-Light
Cost Profile	Expensive, solo burden	Negotiated, awkward	Automated 30-60% cost split
Verification & Safety	Open network, external drivers	Unsafe, unverified groups	Closed loop, Student-only ecosystem

The Asset-Light Advantage

No drivers on payroll. No fleets to manage. We simply provide the digital infrastructure for secure proximity matching.

The Feasibility Diagnostic

Market Feasibility

Target: Hyper-focused strictly on university students.

Driver: Immediate financial relief.
Students saving up to ₦50,000 on airport rides guarantees high willingness to adopt and high retention.

Technical Feasibility

Security Loop: Mandatory School Email Authentication (e.g., .edu.ng) ensures a walled-garden safety protocol.

Infrastructure: Built on Cloud Infrastructure (IaaS/PaaS). Following the ENT312 IoT framework, utilizing a “pay-as-you-go” cloud model eliminates server hardware investment, handling traffic spikes seamlessly.

Building the Strategic Moat: Intellectual Property

Protecting the Brand

Filing for Trademarks on the “**CampusRide**” brand name, logo, and visual identity to secure ultimate mindshare and trust within the closed student ecosystem.

Protecting the Engine

Aggressively guarding our proprietary **destination-proximity matching algorithm** as a **Trade Secret**. This prevents well-funded competitors from simply copying our localized routing efficiencies.

Organizational Feasibility & Culture

The Engine Room

Cross-functional roles established. Tech/Product teams bridge the gap with Business/Negotiation “Translators”.

The Culture

Governed by a Democratic leadership style. All voices are heard to ensure empathy and clarity, but execution remains swift and aligned.

The Moat

We have stress-tested our communication to avoid the #1 startup killer: internal friction.

Entrepreneurial Finance & Roadmap

Key Message: We are not raising to build an empire today. We are seeking strategic mentorship and precise capital to validate the matching algorithm in a live campus environment.

The CampusRide Philosophy

We have engineered the asset-light technology to combat 70% transport inflation. But technology alone doesn't scale. We must continuously communicate value to verified students to build trust. Clear Value + Flawless Execution = CampusRide.
